

TECHNICAL DATA (007E-23200)

- Weight: approx. 400 kg
- Capacity: max 4000kg / h (depending on the product)
- Operating voltage: 400V 3-phase
- Connection power: 1.1 kW
- Noise level: <80 dB

FF WATER CONVEYOR (LARGE)

“

The water conveyor is intended to be placed after a processing machine (such as peelers). In the water tank, excess starch is rinsed off the product. At the same time, the tissue of the product closes, which prevents the surface from drying and prolongs the product's shelf life.

The water conveyor also acts as a buffer tank for the products. The machine is easy to wash and the frame is made of stainless steel.

Manufactured by Forsfood Oy
