“

- **Rinse level:** Typical solution concentration is 4-8%.
- **Dipping time:** The typical dipping time is 1.5-3 minutes. The dipping times given are indicative and depend on the variety, growing conditions, water quality and general purity level. Therefore, we recommend doing your own tests using different rinsing times.
- **Rinse instructions:** Mix the powder with cold water according to the instructions and rinse the potatoes in the solution. Drying the surface after rinsing is important before packaging, as this helps the products to preserve.
